DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-15 and 22-32, drawn to a modular device used to house a plurality of sensors and apparatuses, classified in class 361, subclass 600.
 - II. Claims 16-21 and 33-39, drawn to a robotic vehicle including a drive train, a power supply, and a modular device, classified in class 280, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because robotic vehicles can use any type of devices for storing electrical or mechanical elements. The subcombination can be utilized in any system where a housing for several components is needed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
